

# AUSTRALIAN FINGERLIME CAVIAR

*Exquisite fruits from the rainforests of Australia*

## HOW TO DESEED FINGER LIMES

Finger limes are a native wild fruit, they are used to stress but since the onset of climate change we are noticing that some varieties of finger limes are producing seed. Chef Karl Kanetani from Town Restaurant, Bangalow NSW has devised a method of opening the finger lime fresh or defrosted snap frozen so the seeds remain on the stamen of the fruit, it's easy and no picking out of seeds.
